Dwarf trees are grown from the same stock as our espaliered trees, and have most of their advantages. They require very little space — only one-fourth as much as an ordinary tree, yet they yield an abundance of delicious fruit.

When fully grown, the maximum height of dwarf trees is not over 10 feet, and by proper pruning they can be kept down to six feet. This makes it easy to prune and spray, and the fruit, which is of true variety, is within reach for easy picking.
